### TECHNICAL SKILLS

- C, C++, Java, Python
- HTML, CSS, JavaScript, React
- Node.js, SQL, Git & GitHub
- Arduino, Blynk, IoT Prototyping
- Embedded Logic & Sensor Integration

### LANGUAGES

- English
- Urdu
- Punjabi

# Zaheer Yousaf

## IoT & Web Developer

### PROFILE

Computer Science undergraduate focused on building practical digital products across **IoT automation** and **modern web development**. Strong in turning ideas into usable systems, from sensor-based prototypes and embedded logic to responsive portfolio websites and data-driven applications. Known for learning quickly, working collaboratively, and delivering projects that combine clean user experience with reliable technical execution.

### SELECTED PROJECTS

- **IoT Smart Home Automation System** | Arduino, IR Sensors, Relay Modules, Blynk, Embedded C  
Built an accessibility-focused home automation solution controlled through intentional eye-blink detection, with offline relay switching and IoT mobile control. **Best result:** delivered a dual-mode prototype designed to support differently-abled users.
- **Portfolio Website** | HTML, CSS, JavaScript, Responsive Design  
Designed and developed a personal portfolio website to present projects, technical strengths, and contact information in a polished format. **Best result:** created a strong personal brand and a publish-ready web presence.
- **Supermarket Billing System** | C++, File Handling, OOP  
Developed a billing application for product entry, invoice generation, and purchase record management. **Best result:** improved transaction flow with reusable modules for stock and bill calculations.
- **Bank Management System** | C++, OOP, Data Structures  
Created a banking application for account creation, balance updates, deposits, withdrawals, and customer record management. **Best result:** organized secure menu-driven workflows that simulate core banking operations.
- **Hospital Management System** | C++, OOP, Structured Programming  
Built a system for maintaining patient records, doctor assignments, and appointment data in a centralized workflow. **Best result:** translated real administrative needs into a clear and manageable software structure.
- **Restaurant Management System** | Assembly Language, Logic Design  
Implemented a low-level management project to handle menu selection, order totals, and operational flow using assembly concepts. **Best result:** showcased strong understanding of logic design and step-by-step execution.

### EDUCATION

- **Bachelor of Science in Computer Science** | University of Sialkot | 2023 - 2027  
GPA: 3.04 / 4.00
- **Intermediate in Computer Science** | Nims College Daska | 2021 - 2023

### FOCUS AREAS

- IoT-based automation, smart systems, and embedded device control
- Responsive web interfaces and portfolio-driven front-end development
- Problem-solving through practical software projects and user-focused design
